

PowerFlex

Small and lightweight PowerFlex chargers provide the ultimate in battery charging convenience for NiCad and NiMH batteries.

See page 23 for details.

Tech Tips

- ▶ SKC Universal XR Sample Pumps feature a built-in low flow pressure regulator that allows for low flow sampling in the 5 to 500 ml/min range. This feature, easily accessed on the top of the pump, eliminates the need for a CPC so that only an Adjustable Low Flow Tube Holder is needed for low flow sampling.

SKC Universal XR Sample Pumps

The Xtra Rugged, Xtra Reliable Xtended Range Solution to Air Sampling

PCXR8 — The Programmable Solution

- **Built-in high-accuracy timer:** Sample duration readout and convenient **hold** feature
- **Automatic fault shutdown/time retention:** Ensures sample integrity upon low battery or excess back pressure
- **Delayed start:** Set number of minutes to elapse until sample start
- **Timed shutdown:** Set number of minutes of operation until shutdown
- **Intermittent sampling:** Extend short-term samples over an extended period to meet TWA requirements with fewer samples
- **Extended intermittent sampling up to 7 days - ideal for fenceline monitoring!**

PCXR8 Sample Pump

PCXR4 — The Compliance Solution

- **Automatic fault shutdown and time retention:** Pump shuts down and retains sampling time when battery is low or there is excessive back pressure to ensure sample integrity
- **High-accuracy timer:** Built-in timer provides instant readout of sampling duration. A convenient **hold** feature allows for breaks.

PCXR4 Sample Pump

44XR — The Economical Solution

This turn-on-and-go sample pump is economical and easy to use. Designed for rugged industrial environments, the 44XR sample pump delivers compensated flow for accurate air volumes without frequent sampler adjustments.
